Rose Hip Oil

Rose Hip Oil helps to regenerate damaged skin tissues due to its content of unsaturated essential fatty acids, Trans-Retinoic Acids, in a natural state, as part of a complex system. Therefore, its action is controlled and slowly released by nature. Scientific evidence has demonstrated the properties of Rose Hip Oil in the elimination of certain pigmented spots, the lessening of wrinkles and reducing surgical and accidental scars.

Using Rose Hip Oil as a skin re-hydrator is a most effective way to benefit from it, with its high absorbion level, it penetrates the skin almost instantly to restore the needed moisture balance. Rose Hip Oil also directs moisture to parched areas without over-treating un-parched skin.

With anti-inflammatory properties Rosehip Oil improves burned skin. It also aids in the treatment of dermatitis. It is excellent to prevent and almost immediately relieve dry skin and eczema.

Rose Hip Oil applied twice a day every day for about three months reduces scar tissues, helps to prevent and reduce stretch marks, wrinkles & age spots. For surgical scars, after the stitches have been removed and the wound is totally healed, pure Rosehip oil should be applied with a soft massage. It will take three to four months for the effects to be noticeable, the skin should have better elasticity and the color of the skin will improve significantly. Apply a generous amount of rosehip oil, two or more times daily to old, traumatic scars, though this it will take longer to see the effects.

When purchasing Rose Hip Oil always look for a 100% pure oil. Blended oils do not have the high concentration of active ingredients. The best Rose Hip Oil is produced in Chile. The highest content of essential poly-unsaturated fatty acids which makes Rose Hip Oil so effective, may not be as concentrated in varieties extracted from roses in other countries.
